

FIBER OPTIC 1xN SWITCH *coaxial design*

OVERVIEW

sercalo's fiber optic 1xN switches are bidirectional opto-mechanical switches based on a coaxial design where a single MEMS mirror redirects light from a common fiber to one of N ports. The MEMS technology results in low insertion loss and low crosstalk between channels while keeping a constant switching performance over life.

The switch is available in several different variants to simplify integration in existing systems and reduce development cost. The miniature packages withstands rugged environments and is well suited for direct mounting on printed circuit boards.

The hermetically sealed MEMS and the laser welded fiber collimator guarantee broad temperature range and superior long-term stability. No epoxy is present in the optical path.

The component is compliant to Telcordia 1221 reliability standards and RoHS requirements 2015/863/EU.

FEATURES

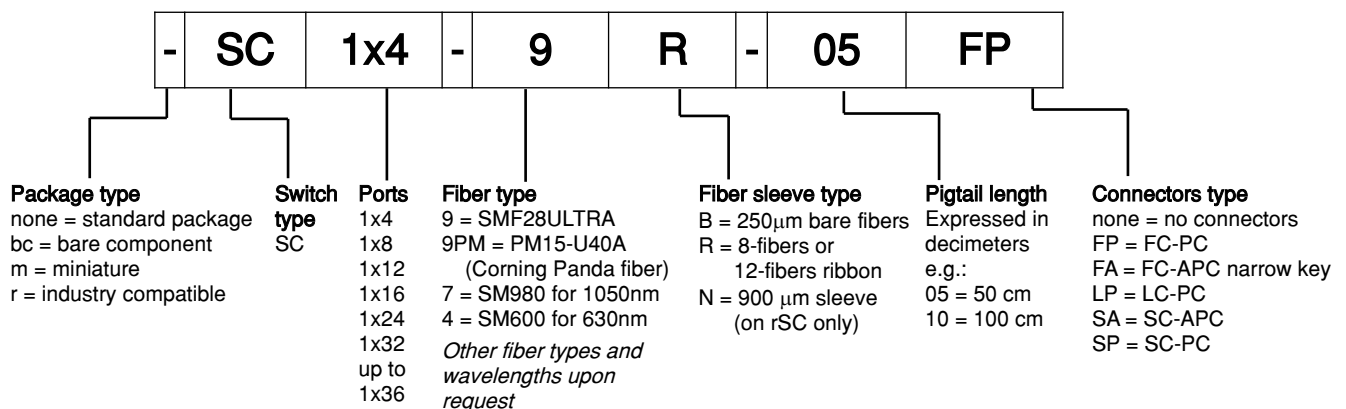

- Low insertion loss
- Reliable
- Up to 1x36 optical ports
- UART, I²C/SMBus and parallel interface
- Ethernet interface available on request
- RoHS compliant

APPLICATIONS

- Optical network switching
- Instrumentation
- Test and measurement

ORDERING INFORMATION

Sercalo's COAXIAL TYPE 1xN switch is non-latching: at power-off it breaks the optical connection and routing of the common port is not defined. The component is bidirectional, the common port can be used as input or output. The **PM Panda version** is offered up to 1x4 ports.

The switch is available in four different variants:

SC: standard size – ribbon fibers

mSC: miniature size – small driver board: 7x40 mm

rSC: compatible with industry pinout

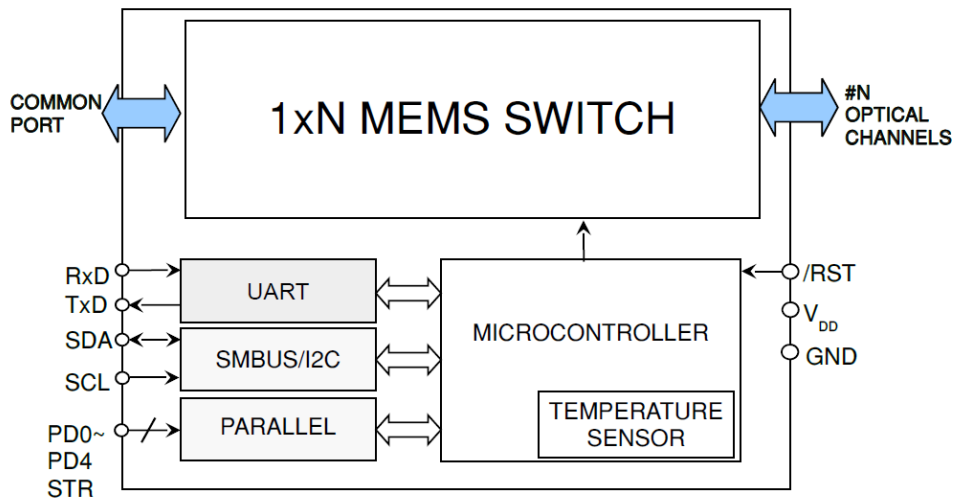

bcSC: bare optical component

¹ Values at 25 °C at 1550 nm, without connectors. For operation over several bands 1250 to 1670 add 0.5 dB. ² It is recommended to turn off the laser during switch transients when switching optical power above 100 mW. ³ For constant temperature and polarization. ⁴ Through onboard pull-up resistor. ⁵ The bare optical component is not protected against ESD.
