Revision 0.92

SINGLE MODE LASER DIODES Fabry-Perot Laser

Genera	l Product	Information
--------	-----------	-------------

Product	Application
1060 nm Fabry-Perot Laser	Sensing
mini FlatPack Package with Window	

Absolute Maximum Ratings

Parameter	Symbol	Unit	min	typ	max
Storage Temperature	T _S	°C	-40		85
Operational Temperature at Case	T _C	°C	-20		60
Forward Current	I _F	mA			950
Reverse Voltage	V_R	V			2
Output Power	P _{opt}	mW			680

Measurement Conditions / Comments

Stress in excess of one of the Absolute Maximum Ratings may damage the laser. Please note that a damaging optical power level may occur although the maximum current is not reached. These are stress ratings only, and functional operation at conditions beyond those indicated under Recommended Operational Conditions is not implied.

Recommended Operational Conditions

Parameter	Symbol	Unit	min	typ	max
Operational Temperature at Case	T _C	°C	0		50
Forward Current	I _F	mA			940
Output Power	P_{opt}	mW	650		

Measurement Conditions / Comments
measured with integrating sphere

SINGLE MODE LASER DIODES Fabry-Perot Laser

Typical Measurement Results

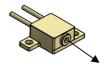

Unpacking, Installation and Laser Safety

Unpacking the laser diodes should only be done at electrostatic safe workstations (EPA). Though protection against electro static discharge (ESD) is implemented in the laser package, charges may occur at surfaces. Please store this product in its original package at a dry, clean place until final use. During device installation, ESD protection has to be maintained.

The laser emission from this diode is close to the invisible infrared region of the electromagnetic spectrum. Avoid direct and/or indirect exposure to the free running beam. Collimating the free running beam with optics as common in optical instruments will increase threat to the human eye.

Each laser diode will come with an individual test protocol verifying the parameters given in this document.

Laser Emission
