Revision 0.91

TAPERED AMPLIFIERS Semiconductor Optical Amplifier

201	7-11-22
	-

General Product Information	
Product	Application
765 nm Tapered Amplifier	Spectroscopy
C-Mount Package	Metrology

Absolute Maximum Ratings

Parameter	Symbol	Unit	min	typ	max
Storage Temperature (non condensing)	Ts	°C	-40		85
Operational Temperature at Case (non cond.)	T _C	°C	0		50
Forward Current	I _F	А			3.3
Reverse Voltage	V _R	V			0
Output Power	P _{opt}	W			1.6
- 1	opt				

Recommended Operational Conditions

Symbol	Unit	min	typ	max
T _C	°C	5		40
١ _F	А			3.0
P _{input}	mW	10		50
P _{opt}	W			1.5
	T _C I _F P _{input}	T _C °C I _F A P _{input} mW	T _C °C 5 I _F A P _{input} mW 10	T_c °C 5 I_F A P_{input} mW 10

Characteristics at T_{LD} = 25 °C at BOL

Parameter	Symbol	Unit	min	typ	max
Design Wavelength	λ_{C}	nm		765	
Gain Width (FWHM)	Δλ	nm		6	
Temperature Coefficient of Wavelength	dλ / dT	nm / K		0.25	
Operational Current @ $P_{opt} = 1.5 W$	I _{op Gain}	А			3.0
Output Power	P _{opt}	W	1.5		
Amplification	G	dB		15	
Cavity Length	L _C	μm		2750	

Measurement Conditions / Comments

Stress in excess of one of the Absolute Maximum Ratings may damage the laser. Please note that a damaging optical power level may occur although the maximum current is not reached. These are stress ratings only, and functional operation at these or any other conditions beyond those indicated under Recommended Operational Conditions is not implied.

Measurement Conditions / Comments
non condensing
with proper injection from a seed laser

Revision 0.91

TAPERED AMPLIFIERS Semiconductor Optical Amplifier

Unpacking, Installation and Laser Safety

Unpacking the laser diodes should only be done at electrostatic safe workstations (EPA). Though protection against electro static discharge (ESD) is implemented in the laser package, charges may occur at surfaces. Please store this product in its original package at a dry, clean place until final use. During device installation, ESD protection has to be maintained.

The TPA diode type is known to be sensitive against thermal stress. It should not be operated without appropriate injection from a seed laser. Operating at moderate temperatures on proper heat sinks willl contribute to a long lifetime of the diode. The chip should be protected against moisture. A water vapor content below 5000 ppm is recommended for applications with high reliability requirements.

The laser emission from this diode is close to the invisible infrared region of the electromagnetic spectrum. Avoid direct and/or indirect exposure to the free running beam. Collimating the free running beam with optics as common in optical instruments will increase threat to the human eye.

Each laser diode will come with an individual test protocol verifying the parameters given in this document.
