Revision 1.00

# **TAPERED AMPLIFIERS Semiconductor Optical Amplifier**

Product	Application
845 nm Tapered Amplifier	Spectroscopy
C-Mount Package	

### Absolute Maximum Ratings

Parameter	Symbol	Unit	min	typ	max
Storage Temperature (non condensing)	Ts	°C	-40		85
Operational Temperature at Case (non cond.)	T <sub>C</sub>	°C	0		50
Forward Current	I <sub>F</sub>	А			4.2
Reverse Voltage	V <sub>R</sub>	V			2
Output Power	P <sub>opt</sub>	W			3.0

### Measurement Conditions / Comments

Stress in excess of one of the Absolute Maximum Ratings may damage the laser. Please note that a damaging optical power level may occur although the maximum current is not reached. These are stress ratings only, and functional operation at these or any other conditions beyond those indicated under Recommended Operational Conditions is not implied.

### Recommended Operational Conditions

Symbol	Unit	min	typ	max
T <sub>C</sub>	°C	5		40
I <sub>F</sub>	А			3.5
P <sub>input</sub>	mW	10		50
P <sub>opt</sub>	W			3.0
	T <sub>C</sub> I <sub>F</sub> P <sub>input</sub>	T <sub>C</sub> °C I <sub>F</sub> A P <sub>input</sub> mW	T <sub>C</sub> °C 5 I <sub>F</sub> A P <sub>input</sub> mW 10	$T_c$ °C 5 $I_F$ A $P_{input}$ mW 10

### Characteristics at T<sub>LD</sub> = 25 °C at BOL

Symbol	Unit	min	typ	max

## Typical Measurement Results

output power with seeding at different wavelengths

Graphs, data and any illustrative material provided in this specification describe the typical performance of the tapered amplifier. The achievable amplification depends strongly on a proper injection of the seed laser. In accordance with the eagleyard Photonics policy of continuous improvement specifications may change without notice.

### Unpacking, Installation and Laser Safety

Unpacking the laser diodes should only be done at electrostatic safe workstations (EPA). Though protection against electro static discharge (ESD) is implemented in the laser package, charges may occur at surfaces. Please store this product in its original package at a dry, clean place until final use. During device installation, ESD protection has to be maintained.

The TPA diode type is known to be sensitive against thermal stress. It should not be operated without appropriate injection from a seed laser. Operating at moderate temperatures on proper heat sinks willl contribute to a long lifetime of the diode. The chip should be protected against moisture. A water vapor content below 5000 ppm is recommended for applications with high reliability requirements.

The laser emission from this diode is close to the invisible infrared region of the electromagnetic spectrum. Avoid direct and/or indirect exposure to the free running beam. Collimating the free running beam with optics as common in optical instruments will increase threat to the human eye.

Each tapered amplifier will come with an individual test protocol verifying the parameters given in this document.
