

The ModBox-OBand-28Gbaud-PAM4 is O-band Linear Reference Transmitter that generates excellent quality optical data streams PAM-4 up to 28 Gbaud and NRZ up to 28 Gb/s. The transmitter produces very clean eye diagrams with high SNR and fast rise and fall times. It also provides the flexibility of adjusting the extinction ratio for vertical eye closure.

The ModBox-OBand-28Gbaud-PAM4 provides R&D and Production engineers with a user friendly turn-key instrument delivering state of the art performance. It is being used in optical telecommunications laboratories and production test beds.

The equipment incorporates a modulation stage based on a chirp-free LiNbO<sub>3</sub> Mach-Zehnder modulator, coupled with a high performance RF driver and an automatic bias control circuitry. It also integrates a 1310 nm DFB laser source, and optional C-WDM or LAN-WDM lasers lanes.

## Functional Block Diagram

## The ModBox-OBand-28Gbaud-PAM4 features:

- A chirp-free X-cut LiNbO<sub>3</sub> (Lithium Niobate) Mach-Zehnder Intensity modulator. It is selected for its high electro-optic bandwidth with flat and low ripple electro-optic response curve.
- A high bandwidth and highly linear RF driver.
- A modulator bias controller. The internal LiNbO<sub>3</sub> modulator is a X-cut device with very low drift. However an automatic bias control circuit is provided to lock the operating point of the modulator at the quadrature point whatever the environmental and optical (laser power and wavelength) conditions. The MBC ensures a highly stable optical output signal to provide reliable and reproducible measurements.
- A 1310 nm low RIN laser is integrated by default. For convenience, an external patch cord is delivered to connect the laser output to the optical input of the modulation stage. Wavelength and power are tunable through the front panel controls or the ModBox software interface.

The ModBox-OBand-28Gbaud-PAM4 is controlled from the front panel via the Smart interface with a simple rotary knob and keypad. The Smart manual interface allows for bias control circuit, RF driver and laser settings. It comes also with a simple GUI solution, Windows based and implemented through the USB interface of the user PC.
